Footnotes

- ¹ It is possible to obtain two fields in econometrics, one in theoretical econometrics and one in applied econometrics. Please discuss the individual courses that would form each of the sequences with the field representative and the Director of Graduate Studies in advance.
- ² Generally, the allowable substitutions will be courses outside the Department with significant theory content (such as some of the PhD courses offered in the Kellogg School of Management) or courses with other relevant mathematical modeling content (such as some courses offered by the Department of Computer Science and in other engineering departments). However, pure math

courses will ordinarily not count for this purpose, although students are strongly encouraged to take these courses in addition to their required sequences. Exception: in one theory sequence, students may substitute one course with either COMP_SCI 496 *Special Topics in Computer Science: Mechanism Design* or COMP_SCI 497 *Special Projects in Computer Science: Theory+X* without the need for prior approval.

- * Temporarily the first point of contact for Labor Economics and Public Economics should be Director of Graduate Studies Marciano Siniscalchi. He will coordinate with relevant faculty.
